“It is quite amazing, actually.”

“Multiple accounts is pretty cool and was quick to switch.”

“Being able to setup all in the app is a nice option.”

“I loved it!”

Imaging using nostr to coordinate transaction signing for a taproot/miniscript based onchain complex multisig wallet.. that's what @Yuki Kishimoto and @Max Gravitt are working on with coinstr.. and it looks very cool!

The most exciting thing to me about nostr is how the combination of Taproot keys + a communication channel enables composability with different bitcoin meta-protocols. Some examples:  
3) @Max Gravitt composing "Bitcoin spending policy and signature orchestration using Taproot and Nostr" <https://coinstr.app/>
