Imaging using nostr to coordinate transaction signing for a taproot/miniscript based onchain complex multisig wallet.. that's what @Yuki Kishimoto and @Max Gravitt are working on with coinstr.. and it looks very cool!

The most exciting thing to me about nostr is how the combination of Taproot keys + a communication channel enables composability with different bitcoin meta-protocols. Some examples:
3) @Max Gravitt composing "Bitcoin spending policy and signature orchestration using Taproot and Nostr" https://coinstr.app/
